OtoProf®

The first self-cleaning ceruminolytic

Ingredients:

- Dioctylsodium sulfosuccinate
- Carbamide peroxide
- Propylene glycol
- Deionised water

Ingredients:

- Dioctylsodium sulfosuccinate
- Carbamide peroxide
- Propylene glycol
- Deionised water

Clinical use:

Ensure the tympanic membrane is intact.

- Use to clean in presence of excessive cerumen.
- Use for ceruminous, crusty or purulent otitis.
- Excellent ceruminolytic for initial cleaning of the outer ear and external auditory canal.
- OtoProf® can be used instead of invasive methods.

Characteristics:

- Dioctylsodium sulfosuccinate: a powerful ceruminolytic, softens and cleans cerumen
- Carbamide peroxide: provides oxygen which carries the cerumen to the surface and acts as an antimicrobial agent.
- Propylene glycol: humectant, removes cerumen.
- Excipients.

How to use OtoProf®:

1. SHAKE WELL BEFORE USE.
2. Introduce OtoProf® into the ear and massage the base of the ear gently.
3. Make sure the product does not run out of the ear before it has time to achieve its purpose.
If necessary use cotton wool to plug the ear.
4. Remove debris.
5. Rinse the ear thoroughly several times with tepid water or physiological solution after use.
6. Dry the whole ear and external auditory canal carefully.

CAUTION

- Avoid contact with eyes.
- For external use only.
- This product may cause slight, temporary inflammation of the ear canal in sensitive subjects.
- Rinse the ear thoroughly after use.

Clean ear with Clorexyderm® Oto after use

- for bacterial otitis: use Otodine® after 8 hours
- for yeast otitis: Clorexyderm® Spot Gel

Using Otoprof® in ceruminous Malassezia otitis
